iOffice powered by VergeSense

BETTER TOGETHER

VergeSense and iOffice by Eptura partner to enable organizations to reimagine workspaces by providing real-time insights that create intuitive hybrid work experiences for employees.

By combining the **VergeSense Occupancy Intelligence Platform** with the iOffice workplace planning and space booking software, organizations can create a safer, more flexible work environment for employees.

VergeSense captures activity across spaces with 95% accuracy - so spaces are being analyzed by the most accurate sensors on the market. Then, review space use with built-in analysis tools by iOffice and make data-driven decisions to adapt and optimize your workspace strategy.
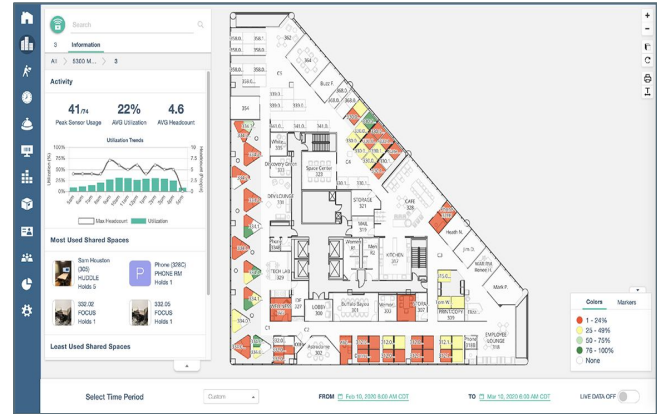

How it works

CAPTURE

A network of wireless and wired occupancy sensors powered by computer vision, anonymously and accurately captures people count, occupancy, and objects within spaces. They're ceiling mounted and cover a wide area office floor, measuring the person count, active and passive occupancy of the spaces in that area. The data feeds directly into iOffice floor plans, then processed, and reported at the space level.

ANALYZE

VergeSense AI and the iOffice Space Right intelligent planning tool work together to continuously collect and analyze data to manage spaces efficiently and implement agile seating strategies.

Analyze trends in the iOffice Space Utilization Dashboard and reconfigure as needed. Easily spot patterns like which space types, locations, or amenities are over or under utilized. Analyze aggregated sensor data with dynamic reports to evaluate what's working and use strategic planning tools to adjust anytime.

VERGE SENSE

Transform employee experience and optimize space

PROBLEMS WE SOLVE

3

Key benefits

- iOffice's **native integration** with VergeSense data provides a streamlined system for managing the workplace

- **Employees are empowered** to find the spaces they need with solutions that they can trust

- **Ability to adapt** to changing needs by continuously ideating, experimenting, and validating new space types
